

'SPORTS' EXHAUST

With 1001 BHP and a top speed of over 250 mph (400 kph) the Bugatti Veyron is billed as the ultimate Sports car, with the biggest numbers.

We don't know about that, but we are certain that with a 16 cylinder engine and 4 turbochargers, the Bugatti Veyron exhaust system has the potential to provide the ultimate exhaust sound.

QuickSilver were commissioned to produce a 'Sports' Exhaust system that provided a more appropriate sound for the Veyron as the sound produced by the OE system has to meet all modern noise regulations and leaves some drivers unsatisfied, especially when they consider the possibilities.

OE system

WEIGHT

The original exhaust is all Titanium and weighs just 19 kilos (42 lbs).

The QuickSilver system has reduced the weight to 11.6 kilos (25.5 lbs) a saving of 7.4 kilos (16 lbs) and is constructed from highly polished stainless steel to improve the aesthetic look of the car as the exhaust becomes visible on the car when the spoiler rises.
